Synthetic manual for learning

Stainless Steel Water Bottle User Manual

How to Use

Rinse thoroughly with warm soapy water before initial use. Suitable for cold beverages up to twenty-four hours and hot liquids up to twelve hours. Ensure the silicone seal ring inside the screw lid is seated flat before tightening to guarantee leakproof transport. Hand washing is recommended to protect the exterior powder finish.

Troubleshooting

If liquid leaks from the lid, unscrew and inspect the internal silicone gasket for misalignment or foreign particles. For residual coffee or tea odors, fill the bottle with warm water and one teaspoon of white vinegar, soak for thirty minutes, and scrub with a soft bottle brush. Do not freeze or place in a microwave oven.

Warranty

Covered by a lifetime warranty against thermal insulation failure and stainless steel manufacturing defects. Dents, exterior paint scratches, and missing lid gaskets from normal usage are not covered. Replacement gaskets are available upon request through our customer care team.
